# Ecotainer Quadro

# Ecotainer Quadro

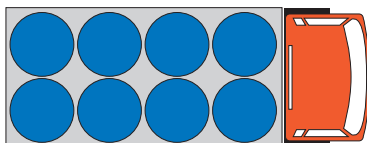

We have been producing Quadrosacks (Baffle bags) for over 13 years with volumes per annum increasing to over 400,000pcs. Our design is simple, yet very effective resulting in a bag, which retains its square shape throughout the full height of the bag. Our Quadrosack is designed to have rigid baffles across the corners with die-cut holes in them to ensure the free flow of your product. Due to our attachment methods, the integrity of the baffle seam can be produced to ensure that even the finest of materials cannot sift through the seams.

**Quadrosacks can be produced to meet your exact requirements however the most commonly produced sizes are:**

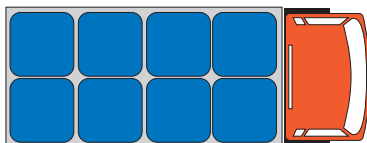

- 97 x 97 cm x height (internal)
- 105 x 105 cm x height (internal)
- 75 x 110 x height (for EURO-pallets) (internal)

The most common designs are coated and fully sift proof to offer moisture protection and leakage prevention. As the baffles give additional reinforcement in a droptest, we are able to supply Y-coded UN-bags (120 cm drop-test) for the transportation and storage of hazardous waste.

In addition to the benefit of a square bag, which offers improved stability during storage, the Quadrosack also gives the added benefit of around 30% improved space utilisation. Safe Working Loads of 2000 kg with a Safety Factor of 6:1 can be supplied.
